ACADEMIC PROJECTS

SIMPLE SHELL - C

In c language

Write a UNIX command line interpreter

AIRBNB- CLONE

Technologies: Python, HTML, CSS, MySQL, Fabric, Flask, JavaScript

The AirBnB clone, the goal of the project is to deploy on your server a simple copy of the AirBnB website.

QARD - FINAL PROJECT

HTML, Bootstrap, CSS, Ajax, Python, Flask, SQLAlchemy, Selenium, Jinja, MySql, Javascript, Aframe, AR.js, Aws.

QARD is a dynamic business card in augmented reality that uses a web application to manage the data of each user.

Its purpose is to keep the data updated, but above all to generate an impact on the person who receives it through augmented reality.

Team:

Marcelo Arbiza - Project Manager & Backend , **Fanco bueno** - FontEnd

Juan Draper - Backend & DevOps, **Rodrigo Mato** - AR Specialist & DevOps

ARVERSE

Hackaton-BlockChain

web3weekendUY -InfiniteWorld

Winner project

ARVerse: It is a platform where you can give a real use to your NFTs. Our NFTS has in its metadata with geographic coordinates of specific places with high public concurrence, such as squares, parks, stadiums, markets. Through the use of augmented reality web you can view any type of content in these locations (3D objects, videos, photos, etc.), to view content you only need to access a URL from any device with a browser and camera. The owner of the NFT will be able to sell it or rent it, some of our NFTs are also fractioning as for example the NFTs that belong to stadiums, giving the possibility to earn a double rent.

Team:

Marcelo Arbiza - Project Manager - Blockchain - Backend, **Rodrigo Mato**- Blockchain - Backend - AR Specialist

Martin Casamayou - Blockchain - Frontend - Backend, **Diego Guarise** - Frontend, **German Cavani**- Frontend
